

- **Step 1: Finalize Shuffle Page (remaining):** Ensure shuffle fetches all filtered albums via

/albums/full endpoint, handles empty list, and integrates loading indicator (spinner).

Test next/prev wrap-around and back navigation.

- **Step 2: Implement FilterContext** (remaining): Move shared functions (handleFilterChange, toggleGenre, resetFilters, clearAllGenres) to FilterProvider, update Albums.jsx and Shuffle.jsx to use context for them, eliminating duplicates and crashes.
- **Step 3: Infinite Scrolling Pagination:** Replace Albums page pagination with infinite scrolling (use IntersectionObserver for next page load, remove dropdown/select/buttons, keep page/limit state internal).
- **Step 4: Login/Refresh Enhancements:** On Albums page, rename "Load Albums" to "Refresh" (refetch albums). Change "Login with Spotify" to "Login with Different Account" (redirect to /login, clear session). Add global loading indicator (spinner overlay) for initial login, Refresh, and shuffle loads.
- **Step 5: Search Bar in Filters:** Add search input in filters section for album/artist name (client-side filter on fetched albums, or backend query param for server-side).
- **Step 6: Popularity Progress Bar:** In album grid, add colored progress bar for popularity (e.g., green for high, red for low, using width % and background-color based on value).
- **Step 7: UI Polish:** Add spinners to all fetches, make grid/large album responsive (media queries for mobile), improve accessibility (ARIA labels, keyboard nav).
- **Step 8: Multi-User Support:** Add express-session to backend for per-user albums/tokens, update controllers to use req.session.
- **Step 9: PWA Setup:** Re-add VitePWA with manifest (name, icons, theme), test offline caching for static assets.
- **Step 10: Deployment:** Frontend to Netlify (GitHub build), backend to Vercel, update backendUrl, test auth/multi-user.
- **Step 11: Testing & Polish:** End-to-end test (login, filters, shuffle, export, search, pagination), add error handling/toasts, optimize (debounce filters), publish.
